

26 June 1961

MEMORANDUM FOR:

FROM:

SUBJECT: Our Comments on Your "General Comments - DMD",
Dated 14 June 1961

STAT

1. I sure pity the poor secretary who took down all your dictation which was supposed to be "off the top of my (your) head". As you asked, we - [] - read it "...from a conversational viewpoint..." I'll have you know.

STAT

2. As can be expected we were gratified at your comment that you were "very impressed".

3. There appear to be many areas, however, which must be discussed in greater detail with you. For example, a couple of the comments I could make follow:

a. The target brief approach is basically IBM oriented, but as [] pointed out it can be readily incorporated into the Minicard system. We'll demonstrate the next time you're in town.

STAT

b. The build-up of data, vis-a-vis the 1401, is bound to be gradual but ever-increasing in scope consistent with the influx of inputs and increases in personnel on board to cope with these inputs.

4. Rather than jotting down only partial comments which could tend to lead to confusion, I'd rather suggest that we defer until you're in town and we can then discuss your paper item by item. I'll keep it handy.
